

INDEX OF EXPERIMENTS

Exp. No.	Experiment Name	Page No.
01	Write a Python program to convert a given text to lowercase and remove all punctuation.	1
02	Write a Python program to tokenize a paragraph into sentences and words using NLTK.	3
03	Write a Python program to remove English stopwords from tokenized words using NLTK.	5
04	Write a Python program to apply stemming to words using NLTK's PorterStemmer.	7
05	Write a Python program to apply lemmatization to words using NLTK's WordNetLemmatizer.	9
06	Write a Python program to perform Part-of-Speech (POS) tagging on a sentence using NLTK.	12
07	Write a Python program to show the most frequent words in a text using NLTK FreqDist.	14
08	Write a Python program to generate bigrams (2-word sequences) from a text using NLTK.	16
09	Write a Python program to perform sentiment analysis (Positive/Negative/Neutral) using NLTK's VADER.	18
10	Write a Python program to perform basic Named Entity Recognition (NER) and chunking using NLTK.	20
